

*Happy New Year!*

Thank you for all for your hard work with the final spurt in enrolling patients! A couple extra patients were enrolled on top of the target so that by the end of December 2021, the number of patients in the database was 607.

As shown in the chart below, six centres, namely Bergen, Brescia, Istanbul, Tartu, Turku, and Vilnius, have already recruited controls for all their patients. Four centres i.e., Greifswald, Helsinki, Kuopio, and Oulu, have recruited more than 95% of controls. Excellent job!

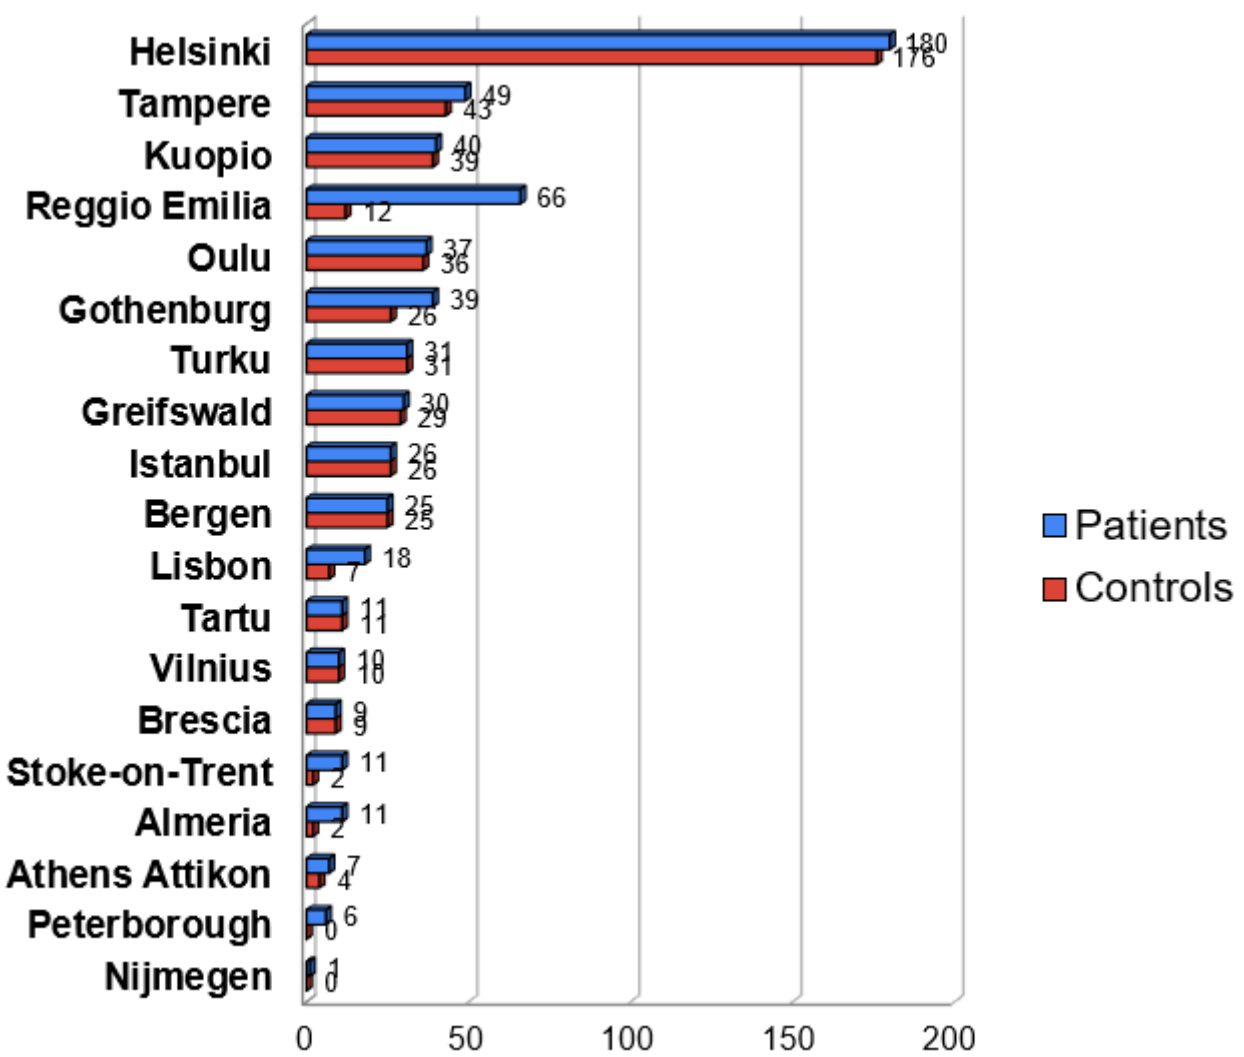

OpenClinica is also getting “greener” all the time but do your best to make it even greener and remember to keep patient follow-up data up to date.

Below please find the timeline for the near future:

- ◆ Patient baseline data should preferably be pre-checked and entered into OpenClinica **by the end of this month**. We aim to begin the process of cleaning and analyzing the patient data **in February**.
- ◆ Altogether, 488 control subjects have been enrolled. Due to the escalation of the Covid-19 situation, we will probably have to extend the recruitment period for the final control subjects. Let’s make all efforts to complete the recruitment of controls and have the samples submitted to FIMM **by the end of April**.

Take care!

**Recap of recruitment by center, December 2021**

**Controls : patients ratio by center, December 2021**
