

As the pandemic slowly begins to slow down in the world, we are witnessing another terrible human catastrophe.

Let's stand together to assist and support the Ukrainian people and colleagues!

Keep up the good work!

For the SECRET O Study, the recruitment of controls progressed well in February. In addition, two more centres, Greifswald and Tampere, joined the 100% Patients: Controls team. As a result, more than half of the sites have recruited all the controls. This is amazing!

We now have a total of 508 controls. In the hopes that COVID-19 infections continue to decline, we hope that even more efforts can be put in recruiting controls so that it can be completed by the end of April.

We would very much like to start analyzing patient data already, so kindly do your best in entering and cleaning your data in the coming weeks.

500th control subject

Big thanks to Stoke-on-Trent for recruiting the 500th control. Congratulations! As a thank you, we will send you something sweet.

Imaging Core Lab

The imaging core lab in Graz has already received the images of over 500 patients, and 250 of the images have already been analyzed. Great progress!

Echocardiography Core Lab

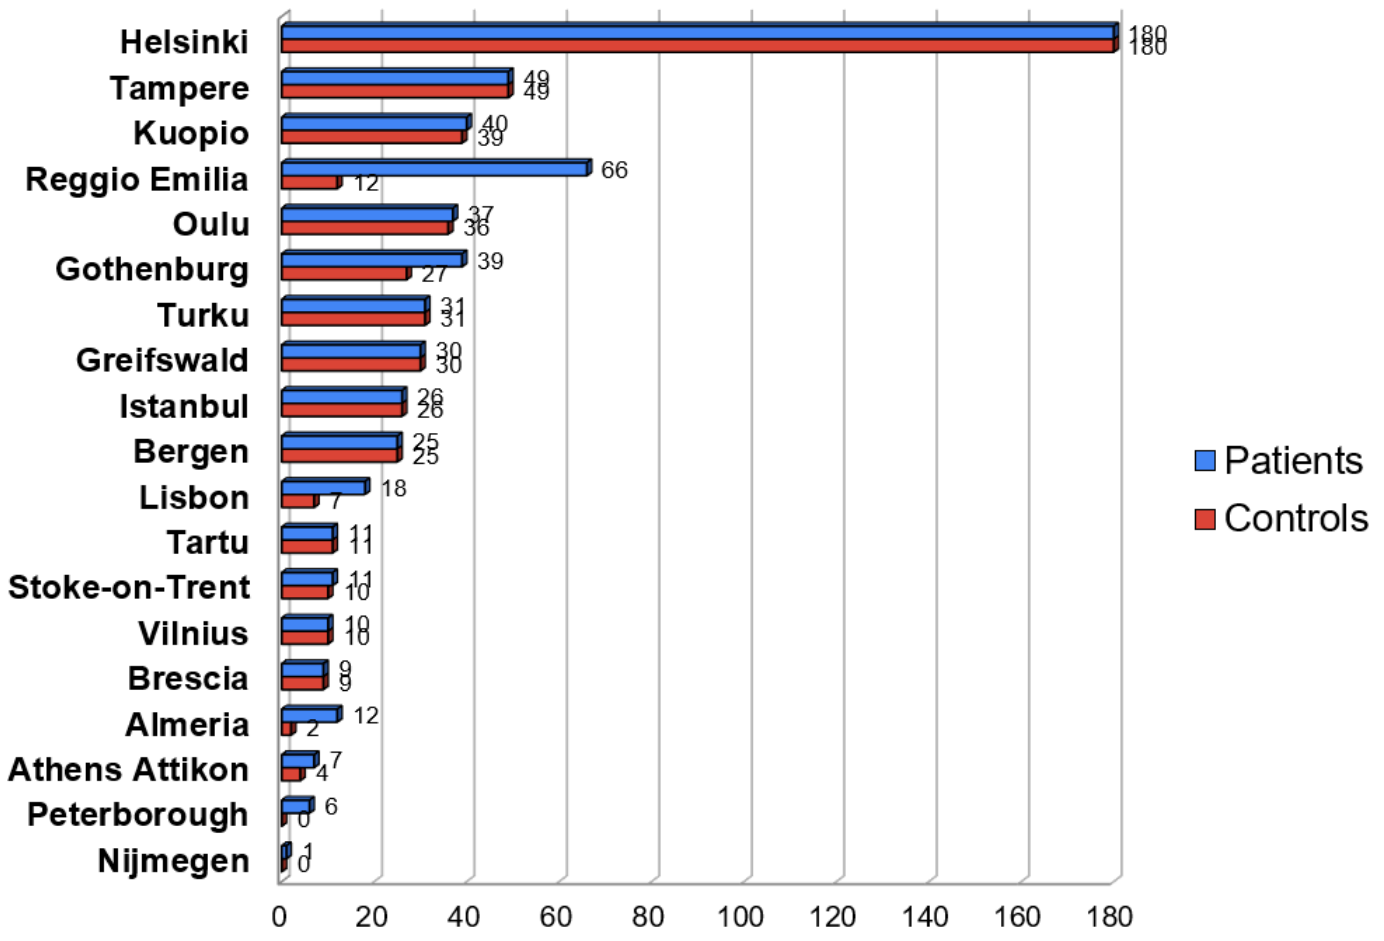

As recently reminded, please pay attention to the image format of echocardiography studies before sending the DVD/flash drive to Bergen. They must be stored in DICOM format. JPG, AVI, or similar formats are not valid and cannot be used in the measurements.

Sample shipments

Please also review the latest version of instructions on how to send the samples to FIMM.

The lab instructions as well as the SOP documents and much more are accessible in the SECRET O File Repository at GoogleDrive.
