

We hope everybody has enjoyed their summer so far!

According to OpenClinica, a total of 536 controls have now been enrolled and assigned to their respective patients – amazing! Special thanks to the Almería and Lisbon teams for enrolling the latest controls.

As we approach the end of controls' recruitment, we hope you share our desire to have remaining controls recruited in time, and at least all patient baseline data and data for enrolled controls entered by the end of this month.

Once completed, please contact us to settle the accounts.

### Deadlines

#### CONTROL RECRUITMENT — AUGUST 31, 2022

It is extremely important to do everything you can to recruit the final control subjects.

#### ECHO DATA TO BERGEN — PASSED

The deadline has passed. Please make sure to send all your participants' echo data to the Echo Core Lab at your earliest convenience.

#### IMAGING DATA TO GRAZ — PASSED

The deadline has passed. If you have not yet sent the neuroimaging data to the Imaging Core Lab, please do so now.

**Please contact us ASAP, if you have had - or will have - difficulties in meeting the deadlines.**

### Virtual Investigator Meeting

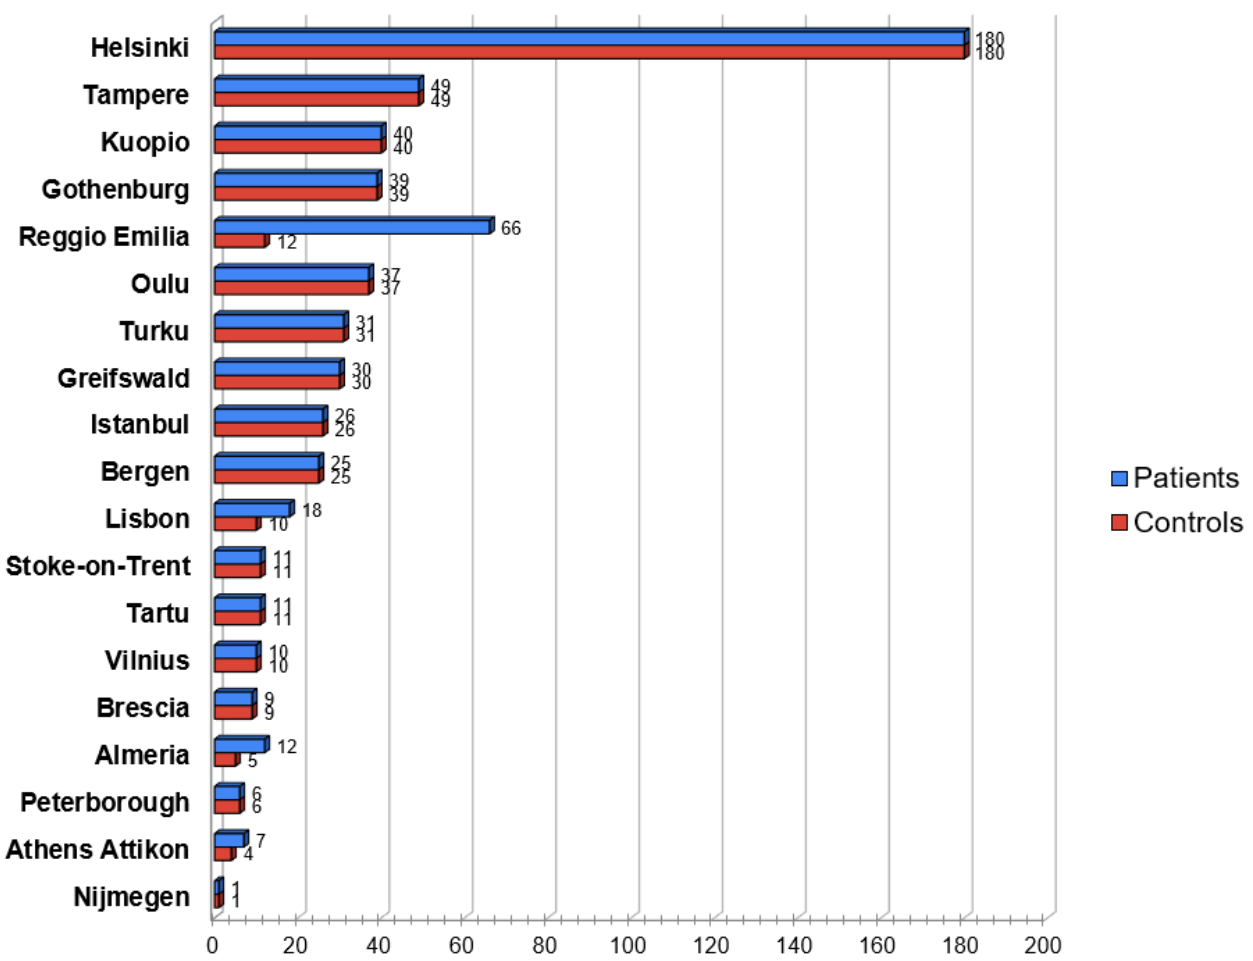

We are looking forward to organizing a meeting to discuss the preliminary results and publication plan. It will take place once all clinical baseline data and control data are available from all sites.

#### Follow-up, follow-up, follow-up!

With the SECRETOnews patient population, we have a unique opportunity to determine the outcome of young patients with cryptogenic stroke with a broad range of interesting phenotypes. Thus, the importance of organizing patient follow-up at your site cannot be overemphasized.

Be sure to report all relevant outcomes and submit source documents to central adjudication.
