

Unfortunately, the horrific events currently taking place in Europe do not seem to be coming to an end soon.

Fortunately, however, the burden and constraints caused by the pandemic are slowly beginning to ease, and, in this respect, it is time to adapt to the new normal.

Recruitment of controls

Since the previous eNews, a few more controls have been recruited, bringing the total to 524. We need to step up our game to be able to lock the database in that regard.

This time, we cannot report any new centres having reached the **100% Patients:Controls Team**, but Stoke-on-Trent, Kuopio, and Gothenburg are approaching the target at a good speed.

It is extremely important to do everything you can to recruit the final controls and enter data so that we can move on to the next phase with the study.

Data monitoring

We keep monitoring the database and continue to send queries. We have also sent Data Reports to most centres. We kindly ask you to do your best to respond to the queries (sent from OpenClinica) and questions on Data Reports in a timely manner.

Final Call - imaging data

This is the final call to send all pending patient neuroimaging DVDs to the Imaging Core Lab. This should occur **by 31 May 2022**.

Final Call - echo data

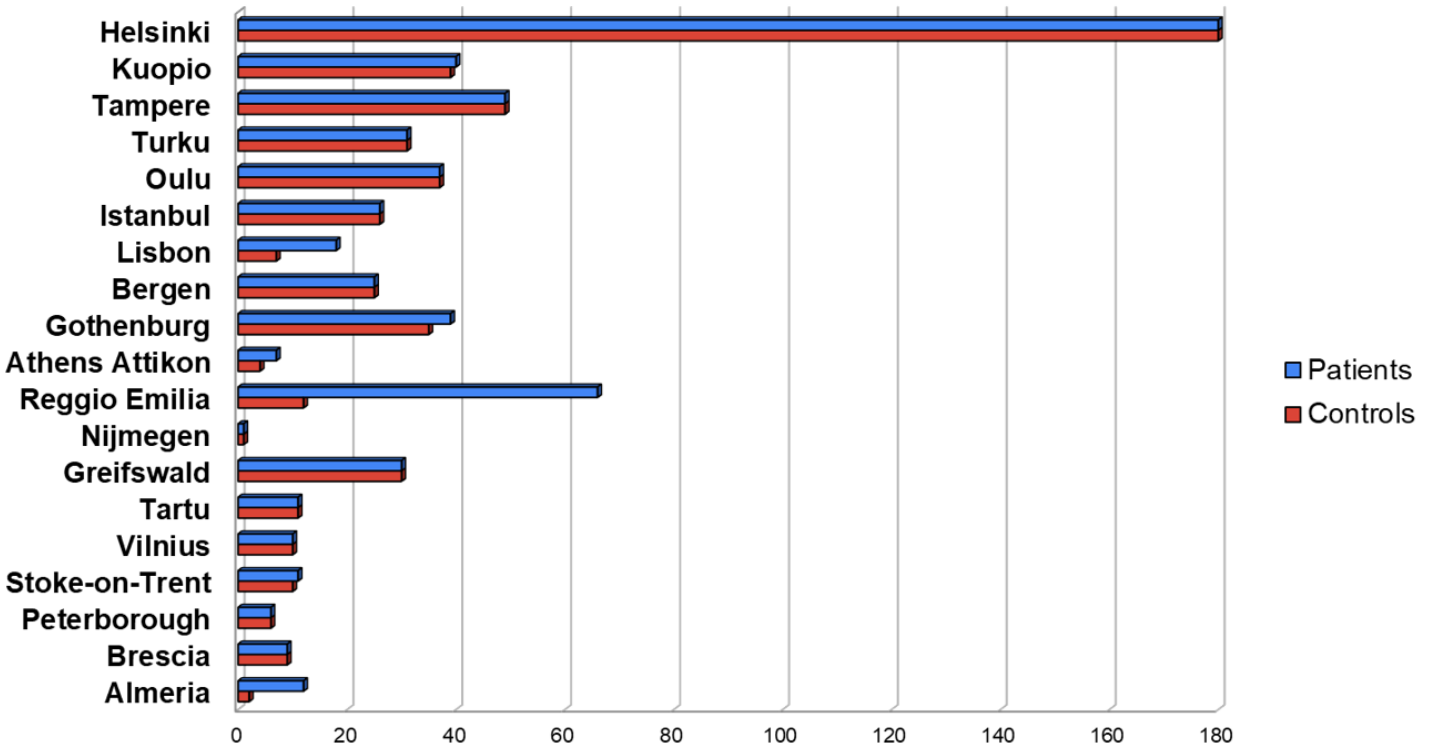

This is also the final call to send echo-DVDs to the Echo Core Lab, if their submission is still pending. This should be finalised **by 30 June 2022**.

The importance of patient follow-up and data cleaning cannot be overemphasized.

Be sure to report all relevant outcomes and submit them to central adjudication.

Recap of recruitment, April 2022

Controls : patients ratio by center, April 2022
